Identification

TD_GETFILE
D. L. Stone

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

Function of Entry:

To initiate and ascertain the length of a segment, given the path or entry name.

Calling Sequence for Entry:

call td_getfile (filename, dir, fileptr, bit_length, error);

Declaration of Arguments:

dcl filename char(*), /* entry name or pathname */
dir char(*) varying, /* directory if entry name above */
fileptr ptr, /* returned ptr */
bit_length fixed bin(17), /* number of bits in segment */
error fixed bin(17); /* error return */

Description of Arguments:

error is as returned from smm$initiate.
