Identification

error
B. L. Wolman

(Note that the following is an Abstract, which should
be replaced by a full description at a later time.)

Function of Entry:

Prints error messages for the PL/I compiler

Requires special segment "message_list"

This procedure of use only to PL/I compiler

Calling Sequence for Entry:

call error(error_number, statement_id, token_pt);

Declaration of Arguments:

```
dcl   error_number   fixed bin(15),
      statement_id   fixed bin(31),
      token_id       ptr;
```

Description of Arguments:

error_number determines error message

statement_id is packed representation of statement #
    and line # where error occurred

token_pt points at token table entry for symbol to be
    inserted in message.
