**Glyphosate: The “Safe” Herbicide that’s Making us all Sick!**

Stephanie Seneff, MIT CSAIL
Institute of Sustainable Nutrition
Saturday, March 24, 2018

---

**New York Times: “Another View”**
**July 13, 2015**

“The GMO experiment, carried out in real time and with our entire food and ecological system as its laboratory, is perhaps the greatest case of human hubris ever. It creates yet another systemic, ‘too big too fail’ enterprise — but one for which no bailouts will be possible when it fails.”

Mark Spitznagel and Nassim Nicholas Taleb

Outline

• Introduction
• Glyphosate as a glycine analogue
• Food allergies and autoimmune disease
• Collagen and gelatin
• Animals in distress
• How to protect yourself
• Summary

US Health Status

• US makes up 5% of the world’s population but consumes more than 50% of the world’s pharmaceutical drugs
• We spend more on health care than Japan, France, China, UK, Italy, Canada, Brazil, Spain, and Australia, combined
• US ranks last or near last among developed nations on infant mortality and life expectancy
• We also suffer from more chronic illnesses
• We consume 20% of the world supply of glyphosate
Roundup and GMO Crops

GMO Roundup-Ready corn, soy, canola, sugar beets
cotton, tobacco and alfalfa

What is glyphosate?

Glyphosate vs. Other Pesticides:
Usage in the United States*

Percent of Acres Treated with Pesticides

Glyphosate and AMPA (Breakdown Product) Far Exceed Other Chemicals*

Table 7: Pesticides and transformation products* detected in aquatic environments in the Lower Fraser Valley and Okanagan Basin, British Columbia, sampling 2003-2005.

*Table from PRESENCE AND LEVELS OF PRIORITY PESTICIDES IN SELECTED CANADIAN AQUATIC ECOSYSTEMS. published in 2011 by the Canadian Government

Main Toxic Effects of Glyphosate*

- Interferes with function of cytochrome P450 (CYP) enzymes
- Chelates important minerals (iron, cobalt, manganese, etc.)
- Interferes with synthesis of aromatic amino acids and methionine
  - Leads to shortages in critical neurotransmitters and folate
- Disrupts sulfate synthesis and sulfate transport

*Samsel and Seneff, Entropy 2013, 15, 1416-1463
Autism Prevalence: 6 year olds

Data sources: autism: US Department of Education; Glyphosate: US Department of Agriculture

Age Adjusted Deaths from Senile Dementia (ICD F01, F03 & 290)

Plotted against glyphosate use on corn & soy

(R = 0.9942, p <= 1.822e-09)

Sources: USDA:NASS; CDC

Figure 24. Correlation between age-adjusted dementia deaths and glyphosate applications.

Correlations between Glyphosate and Multiple Cancers*

Commentary: IARC Monographs Program and public health under siege by corporate interests*

Peter F. Infante DrPH | Ronald Melnick PhD | James Huff PhD | Harri Vainio MD

- IARC declared glyphosate a “probable carcinogen” in 2015
- Monsanto sent a threatening letter of intimidation to IARC staff
- Ominously, EPA staff has been accused of collusion with Monsanto to downgrade the health hazards of glyphosate

“The interferences by economic interests in cancer evaluations conducted by public health institutions do not bode well for the free flow of scientific information that informs and protects the public and workers from clear risks of cancer.”

Glyphosate and Antibiotic Resistance*

- Huge and growing problem with antibiotic resistant microbes in hospitals worldwide
- Glyphosate is a patented antimicrobial agent
- Chronic low-level exposure to one antibiotic empowers pathogens to become resistant to other antibiotics

Glyphosate-Resistant Weeds

A maize field in Georgia, USA, in 2010, over-run with glyphosate-resistant Palmer amaranth.

From GMO Myths and Truths, EarthOpenSource
Enlist Duo!

• The answer to glyphosate resistance in weeds!
• Corn and soybean crops are now engineered to resist both glyphosate and 2,4 D
• Enlist Duo contains a mixture of both of these herbicides
• The synergistic effects can only be imagined at this time

“Monsanto’s new Roundup Ready Xtend cotton and soybeans are engineered to be resistant to a combination of *glyphosate and dicamba*, while Dow AgroSciences’ new breed of Enlist Duo corn and soybeans are resistant to a combination of *glyphosate and 2,4-D.*”*
What If Glyphosate Could Insert Itself Into Protein Synthesis by mistake???

Any proteins with conserved glycine residues are likely to be affected in a major way
Glyphosate is a non-coding amino acid analogue of glycine

![Graphical representation of glycine and glyphosate]

Extra Piece Sticks Out at Active Site

- Substrate no longer fits in active site
- Extra piece sticks out
- Peptide chain changes
**Extra Piece Sticks Out at Active Site**

This explains how glyphosate disrupts EPSPS in the shikimate pathway: Multiple bacteria and weeds have developed resistance by replacing active site glycine with alanine and this is the basis for GMO Roundup Ready crops.

* T Funke et al., Molecular basis for the herbicide resistance of Roundup Ready crops. PNAS 2006;103(35):13010-13015.

---

**Inhibition of EPSPS by glyphosate:**

**Resistant E coli mutant**

![Graph showing inhibition of EPSPS activity by glyphosate]

Wild type with glycine 96

Mutant with alanine substituted for glycine 96

*Figure 3, S Eschenburg et al. Planta 2002;216:129-135.*
**Quote from Monsanto Study (1989)**

- Study exposed bluegill sunfish to carbon-14 radiolabelled glyphosate
- Measured radiolabel in tissues greatly exceeded measured glyphosate levels
- Proteolysis recovered more glyphosate
  
  20% → 70%

"Proteinase K hydrolyses proteins to amino acids and small oligopeptides, suggesting that a significant portion of the 14C activity residing in the bluegill sunfish tissue was tightly associated with or incorporated into protein."

---

**Some Predicted Consequences**

- Impaired CYP enzymes → low bile acids, low vitamin D, impaired detox capabilities
- Neurological diseases (autism, Alzheimer's, ...)
- Autoimmune diseases (Celiac disease, MS, ...)
- Chronic fatigue syndrome (myosin impairment)
- Impaired collagen → osteoarthritis
- Fatty liver disease
- Obesity and adrenal insufficiency
- Impaired iron homeostasis and kidney failure
- Insulin resistance and diabetes
- Cancer

Glyphosate Disrupts Cytochrome P450 (CYP) Enzymes*

- Glyphosate has been shown to severely suppress CYP enzymes in rat liver
- CYP enzymes have a unique FXXGXRXCXG motif with two and sometimes three critical glycine residues**

CYP enzymes have many roles: producing bile acids, activating vitamin D, synthesizing estrogen, metabolizing vitamin A, detoxifying toxic chemicals

Inhibition of Cytochrome P450 Enzymes (CYPs) by Various Pesticides*

![Graph showing inhibition of CYPs by various pesticides](image)

Study in rats on 2,4-D, clofibrate, MCPA, and glyphosate

Glyphosate Exposure During Pregnancy Leads to Shortened Gestation Length*

- Population study in Indiana
  - Measured glyphosate levels in urine
  - 93% of 71 women had detectable urinary glyphosate
  - Higher levels associated with rural areas
- Higher urinary glyphosate correlated with shorter gestation (p = 0.02)
- Hypothesized hormonal disruptions:
  - Aromatase suppression (CYP enzyme) causes estrogen deficiency
  - Defective CYPs prevent retinoic acid clearance

*S Parvez et al. Environmental Health 2018; 17:23
"Glyphosate is not toxic in the conventional sense. It destroys our biology at the cellular level one molecule at a time through disruption of proteins and signaling. Integration of glyphosate with globular and structural proteins is how it can be the cause of an endless array of unrelated diseases, and unleash a cascade of ill health effects that kill us like a slow cumulative poison."

-- Anthony Samsel
Alzheimer's disease has been specifically linked to a GXXXGXXXGXXXG motif in a specific region of amyloid precursor protein.

“Glyphosate Substitution for Glycine During Protein Synthesis as a Causal Factor in Mesoamerican Nephropathy”*

• Young men who work in the sugar cane fields in Central America are dying in record numbers from an unusual form of kidney failure
• Heavy labor in hot climate leads to dehydration
• *Glyphosate incorporation into multiple proteins can fully explain observed symptoms

“Specifically, glycine substitution in aquaporin, chloride channels, cytochrome C oxidase and collagen, among others, could contribute to dehydration, increased urinary acidification, renal fibrosis, rhabdomyolysis and mitochondrial dysfunction.”

Glyphosate and Anencephaly*

- Yakima, Benton and Franklin counties in Washington State have an unusually high number of pregnancies affected by the birth defect, anencephaly
- 75 pesticides were analyzed in studying contamination due to surrounding agriculture
  - 47 (63%) of these were detected
  - Glyphosate was applied in large amounts, but was not studied
- 5% solution of glyphosate was also used heavily around irrigation ditches to control weeds
  - Main herbicide recommended due to its “low toxicity”

*Glyphosate has been linked to anencephaly due to its effect on retinoic acid*

---

Food Allergies and Autoimmune Disease
Autoimmune Disease: An Invisible Epidemic*

“Taken together, the number of people suffering from autoimmune diseases is 24–50 million Americans, 16% of the US population. To put it in perspective, autoimmune disease prevalence equals heart disease and cancer combined.”

Autoimmune Disease Statistics*

- Annual direct health care costs for AD in US estimated to be ~$100 billion
- At least 23.5 million Americans suffer from one or more autoimmune diseases
- Among the top-10 causes of death in females under 64 years old
- Immunosuppressant treatments have devastating side effects

*https://www.aarda.org/autoimmune-information/autoimmune-statistics/
Why do we have an epidemic in autoimmune disease in America today?

Hypothesis

• Glyphosate exposure sets up a weakened immune system, a leaky gut barrier and a leaky brain barrier
• Glyphosate contamination in proteins makes them hard to break down
• Glyphosate disrupts the pancreatic enzymes that metabolize proteins
• Person develops overactive antibody response to foreign protein contaminated with glyphosate and, through molecular mimicry, this leads to autoimmune disease
• This easily explains gluten intolerance and other food allergies
Food Allergies

All of these foods can be expected to be contaminated with glyphosate, given how they’re produced.
Glyphosate and Celiac Disease*

![Glyphosate and Celiac Disease](image)

Celiac disease: Impaired gluten digestion

- Gluten intolerance results from inability to break down gluten, which is enriched in proline*
- The enzyme that breaks down proline depends on manganese as a catalyst (depleted by glyphosate)
- It also contains three regions with highly conserved glycines**
- Malabsorption can lead to nutritional deficiencies and symptoms of autism ***

**F Morel et al., Biochimica et Biophysica Acta 1999; 1429: 501-505
Celiac disease: Impaired gluten digestion

- The enzyme that breaks down proline depends on manganese as a catalyst (depleted by glyphosate).
- It also contains three regions with highly conserved glycines.**
- Malabsorption can lead to nutritional deficiencies and symptoms of autism.***

Wheat is routinely sprayed right before harvest with glyphosate as a desiccant.

Other treated plants include Sugar cane, barley, peanuts, maize and legumes.

**F Morel et al., Biochimica et Biophysica Acta 1999; 1429: 501-505

Collagen and Gelatin
Collagen and Gelatin

- 25% of the protein in our body is collagen
- 25% of the amino acids in collagen are glycines
- Glyphosate substitution for glycine will disrupt triple-helix formation and lead to diseases of the vasculature, joints and bones
- Gelatin is derived from collagen in bones and ligaments sourced from cows and pigs fed glyphosate-contaminated GMO Roundup-Ready feed

Products Containing Gelatin!!

Rheumatoid Arthritis

- Inflammation in the joints causes pain and limits movement
  - Small joints of the hands, feet and cervical spine most affected
- Can lead to lung fibrosis
- Increases risk to atherosclerosis, heart attack and stroke.
- Poor iron absorption leads to "anemia of chronic disease"
- Fatigue, low grade fever, malaise, morning stiffness, loss of appetite and loss of weight

US Department of Health and Human Services Data on Pain-Killer Drug Abuse*

- Drug overdose is the leading cause of injury death in the United States
  - Heroin, morphine, and prescription pain relievers
- More people died from drug overdoses in 2014 than in any previous year on record
- More than 6 out of 10 involved an opioid drug
- More than 650,000 opioid prescriptions are dispensed every day

What You Can Do

Go Organic!
• Sauerkraut and apple cider vinegar contain acetobacter, one of the very few microbes that can metabolize glyphosate
• Yogurt and kimchi probably do, too

New Book by Zen Honeycutt
Founder of Moms Across America
Fixing the Soil*

• Dirt is inert; soil is alive
• Missouri farmer JR Bollinger grew corn and soy on a former coal mine
• “We tried … all kinds of goodies: humates, … sea minerals, microbes, fish meal and biochar powder.”
  – Earthworms till the soil
  – Soil microbes are crucial for soil health
• Greatly reduce fertilizer needs and improve yield

A Hopeful Quote*

“It’s interesting that in 2016, for the first time in almost 20 years, what we saw is a decrease in the amount of acreage where genetically engineered crops are growing around the world. This represents the fact that this technology is failing, in the sense of superweeds and superpests are popping up all over the world.”

Ronnie Cummins, founder of the Organic Consumers Association

*articles.mercola.com/sites/articles/archive/2017/03/26/market-rejection-of-gmos-grows.aspx
Summary

- Glyphosate is pervasive in our food supply today
  - Contrary to popular belief, it is insidiously cumulatively toxic to all life forms, including humans
- Time trends in glyphosate usage on core crops are correlated with alarming rises in a large number of debilitating diseases, including autism, Alzheimer’s and cancer.
- Glyphosate’s insidious toxicity is likely mediated through substitution for glycine during protein synthesis by mistake
  - Explains causal relationship with multiple diseases, particularly autoimmune diseases and neurological diseases
- Glyphosate is likely a major factor in antibiotic resistance
- Glyphosate in collagen leads to opioid drug epidemic
- Glyphosate explains the epidemic in kidney failure among sugarcane workers
- Glyphosate urgently needs to be banned, worldwide
